1 [Session 4: Web service applications: Authenticating distributed data XML signatures](#)

Daniel J. Polivny, Roberto Tamassia

November 2002 **Proceedings of the 2002 ACM workshop on XML**

Full text available: [pdf\(164.09 KB\)](#) Additional Information: [full citation](#), [index terms](#)

As the need for digital data becomes more ubiquitous, so does the need for mechanisms for distributing and verifying the authenticity of that data. We propose a system for authenticating responses to queries from untrusted mirrors of authenticated Web Services and XML Signatures. We also describe an implementation of a Secure Transaction Management System.

Keywords: Web services, XML, authentication, digital signatures

2 [Data mining aided signature discovery in network-based intrusion detection](#)

Hong Han, Xian Liang Lu, Jun Lu, Chen Bo, Ren Li Yong

October 2002 **ACM SIGOPS Operating Systems Review**, Volume 36

Full text available: [pdf\(467.17 KB\)](#) Additional Information: [full citation](#), [index terms](#)

In Network-based Intrusion Detection, signatures discovery is an important task. The performance of an intrusion detection system heavily depends on accurate and up-to-date signatures. In most cases, we have to find these signatures manually. To

and error-prone work. Some papers introduce data mining into Intrusion detection systems. However, there are some drawbacks in these schemes. We present a data mining approach to supporting signature discovery in network ...

Keywords: data mining, intrusion detection system, network-based intrusion detection, signature discovery

3 [DB-4 \(databases\): similarity search: Localized signature table: fast search over huge transaction data](#)

Qiang Jing, Rui Yang, Panos Kalnis, Anthony K. H. Tung

November 2004 **Proceedings of the Thirteenth ACM conference on knowledge management**

Full text available:  [pdf\(200.77 KB\)](#) Additional Information: [full citation](#), [index terms](#)

Recently, techniques for supporting efficient similarity search over huge datasets have emerged as an important research area. Several indexing schemes have been proposed in this direction. Typically, these schemes provide a tradeoff between search performance and indexing overhead in terms of space.

In this paper, we propose a novel indexing scheme for similarity search based on well-studied clustering techniques, we develop a construction algorithm that can efficiently support similarity search over huge datasets.

Keywords: data mining, indexing, similarity search, transaction data

4 [Second-order signature: a tool for specifying data models, query processing and optimization](#)

Ralf Hartmut Güting

June 1993 **ACM SIGMOD Record , Proceedings of the 1993 ACM SIGMOD conference on Management of data**, Volume 22 Issue 2

Full text available:  [pdf\(1.38 MB\)](#) Additional Information: [full citation](#), [index terms](#)

Keywords: algebra, data model, extensibility, functional programming, polymorphism, query processing, signature, type system

5 [Hancock: A language for analyzing transactional data streams](#)

Corinna Cortes, Kathleen Fisher, Daryl Pregibon, Anne Rogers, Frederick S
March 2004 ACM Transactions on Programming Languages and Systems
Volume 26 Issue 2

Full text available:  [pdf\(217.55 KB\)](#) Additional Information: [full citation](#), [citations](#), [index terms](#)

Massive transaction streams present a number of opportunities for data mining. Such streams might represent calls on a telephone network, purchases, stock market trades, or HTTP requests to a web server. While they have been collected for billing or security purposes, they are now being used by transactors, for example, credit-card numbers or IP addresses, used over the past 5 years, w ...

Keywords: Domain-specific languages, data mining, statistical models

6 Efficient similarity search for market basket data

Alexandros Nanopoulos, Yannis Manolopoulos

October 2002 **The VLDB Journal — The International Journal on Very Large Data Bases**
Volume 11 Issue 2

Full text available:  [pdf\(212.88 KB\)](#) Additional Information: [full citation](#), [citations](#), [index terms](#)

Several organizations have developed very large market basket databases containing customer transactions. New applications, e.g., Web recommendation systems, require a fast and efficient way to process similarity queries in market basket database. We propose a novel scheme for similarity search queries in basket data. We introduce a new representation method, which, in contrast to existing approaches, is promising for similarity search. New algorithms are proposed for the ...

Keywords: Data mining, Market basket data, Nearest-neighbor, Similarity search

7 Data types are values

James Donahue, Alan Demers

July 1985 **ACM Transactions on Programming Languages and Systems**
Volume 7 Issue 3

Full text available:  [pdf\(1.55 MB\)](#) Additional Information: [full citation](#), [citations](#), [index terms](#)

An important goal of programming language research is to isolate the fundamental ideas of programming languages, those basic ideas that allow us to understand the relationships between different programming languages. This paper examines one of these underlying notions, that of data type.

attention to the treatment of generic or polymorphic procedures and sta

8 Hancock: a language for processing very large-scale data

Dan Bonachea, Kathleen Fisher, Anne Rogers, Frederick Smith

**December 1999 ACM SIGPLAN Notices , Proceedings of the 2nd c
specific languages**, Volume 35 Issue 1

Full text available:  [pdf\(861.82 KB\)](#) Additional Information: [full citation](#), [citations](#), [index](#)

A signature is an evolving customer profile computed from call records. detect fraud and to target marketing. Code to compute signatures can't maintain because of the volume of data. We have designed and implemented domain-specific programming language for describing signatures. Hancock abstraction mechanisms to manage the volume of data and control abstraction over records. This paper ...

9 A dynamic signature technique for multimedia databases

F. Rabitti, P. Zezula

December 1989 Proceedings of the 13th annual international ACM SIGART Research and development in information retrieval

Full text available:  [pdf\(1.45 MB\)](#) Additional Information: [full citation](#), [citations](#), [index](#)

A signature file acts as a filtering mechanism to reduce the amount of data searched during query evaluation. Even though several techniques for creating signature files have been proposed in literature, they have serious limitations in multimedia databases, where integrated access methods to text and images are required. A new signature technique, called Quick Filter, is proposed in the paper. A signature ...

10 Research sessions: data mining applications: Cost-based labeling of mass spectra

Lei Chen, Zheng Huang, Raghu Ramakrishnan

June 2004 Proceedings of the 2004 ACM SIGMOD international conference on Management of data

Full text available:  [pdf\(351.21 KB\)](#) Additional Information: [full citation](#), [citations](#), [index](#)

We make two main contributions in this paper. First, we motivate and identify data mining problems that arise in labeling a group of mass spectra, specifically atmospheric aerosols, but with natural applications to market-basket data mining. In other recent work in which we introduced the problem of labeling a single spectrum, we were motivated by the advent of a new generation of Aerosol Time-of-Flight Mass Spectrometers.

capable of generating ma ...

signature, oncard-matching, smartcards, system security, tamper proof

14 A mathematical approach to nondeterminism in data types

Wim H. Hesselink

January 1988 **ACM Transactions on Programming Languages and
Volume 10 Issue 1**

Full text available:  [pdf\(2.23 MB\)](#) Additional Information: [full citation](#), [citations](#), [index](#)

The theory of abstract data types is generalized to the case of nondeterministic functions. Since the nondeterminism of operations may be coupled, extended so that operations can have results in Cartesian products. In particular, it is used to characterize implementation of one model by another. It is described how arrows, which form a generalization of the term algebra. Morphisms of arrows are introduced. Both i ...

15 Performance evaluation of a wireless hierarchical data dissemination scheme

Qinglong Hu, Dik Lun Lee, Wang-Chien Lee

August 1999 **Proceedings of the 5th annual ACM/IEEE international conference on computing and networking**

Full text available:  [pdf\(1.21 MB\)](#) Additional Information: [full citation](#), [citations](#), [index](#), [terms](#)

16 Declustering of key-based partitioned signature files

Paolo Ciaccia, Paolo Tiberio, Pavel Zezula

September 1996 **ACM Transactions on Database Systems (TODS)**

Full text available:  [pdf\(2.58 MB\)](#) Additional Information: [full citation](#), [citations](#), [index](#)

Access methods based on signature files can largely benefit from possible environments. To this end, an effective declustering strategy that would combine a set of parallel independent disks has to be combined with a synergic code to avoid searching the whole signature file while executing a query. This paper proposes two parallel signature file organizations, Hamming Filter (HF) and

Keywords: error correcting codes, information retrieval, parallel independent disk drives, queries, performance evaluation, superimposed coding

17 Workload analysis: Accurate, scalable in-network identification of p2p signatures

Subhabrata Sen, Oliver Spatscheck, Dongmei Wang

May 2004 **Proceedings of the 13th international conference on World Wide Web**

Full text available:  [pdf\(205.76 KB\)](#) Additional Information: [full citation](#), [citations](#), [index](#)

The ability to accurately identify the network traffic associated with different application-level protocols is important to a broad range of network operations including application-level traffic monitoring, capacity planning, provisioning, service differentiation, etc. However, traditional application mapping techniques such as default server TCP or UDP based disambiguation is highly inaccurate for some P2P applications. In this paper we propose an efficient approach ...

Keywords: application-level signatures, online application classification

18 On Compacting Test Response Data Containing Unknown Values

Chen Wang, Sudhakar M. Reddy, Irith Pomeranz, Janusz Rajski, Jerzy Tyszer
November 2003 **Proceedings of the 2003 IEEE/ACM international conference on Computer-aided design**

Full text available:  [pdf\(180.56 KB\)](#) Additional Information: [full citation](#), [citations](#), [index](#)

The design of a test response compactor called a Block Compactor is given. It belongs to a new class of compactors called Finite Memory Compactors. Unlike space compactors, finite memory compactors contain memory elements. Block compactors, finite memory compactors have finite impulse response. This gives memory compactors the ability to achieve higher compaction ratios than space compactors while being able to tolerate unknown values in test responses. ...

19 Research sessions: potpourri: Mining database structure; or, how to mine the browser

Tamraparni Dasu, Theodore Johnson, S. Muthukrishnan, Vladislav Shkapenko
June 2002 **Proceedings of the 2002 ACM SIGMOD international conference on Management of data**

Full text available:  [pdf\(1.21 MB\)](#) Additional Information: [full citation](#), [citations](#), [index](#)

Data mining research typically assumes that the data to be analyzed has been cleaned, and processed into a convenient form. While data mining tools assist the analyst to make data-driven discoveries, most of the time spent is spent in data identification, gathering, cleaning and processing the data. Data mapping tools have been developed to help automate the task of using multiple sources for a single ...

20 Accessing data cubes along complex dimensions

Yuping Yang, Mukesh Singhal

November 1999 **Proceedings of the 2nd ACM international works warehousing and OLAP**

Full text available:  [pdf\(658.97 KB\)](#) Additional Information: [full citation](#), [index terms](#)

In a data warehouse, data cubes are accessed through their dimensions numerical, because numerical data can be clustered or sorted, fast acce search or B+ trees can be applied. However, complex attributes such as contents are not easily sorted or clustered. Although it is highly desirabl searched through their sets of keywords.Signature index is known for its comple ...
